

1. Python for Data Analysis

Topics to Cover:

- Basic syntax, data structures (lists, dictionaries, DataFrames)
- Data manipulation with pandas

Resources:

- [Kaggle Python Micro-Course](#) (Free, interactive)
- [Kaggle Pandas Micro-Course](#)
- [Automate the Boring Stuff with Python](#) (Chapter 1–3)

Suggested Time Frame:

Day 1 (2 hours) — Core Python

Day 2 (2 hours) — pandas basics

2. Data Cleaning & Exploration

Topics to Cover:

- Handling missing values, duplicates, outliers
- Basic exploratory data analysis (EDA)
- Summary statistics: mean, median, mode, standard deviation

Resources:

- [Data Cleaning Course — DataCamp](#) (First few chapters: Free preview)
- [10 Minutes to pandas](#)
- [Kaggle Data Cleaning Challenge](#)

Suggested Time Frame:

Day 3 (2 hours) — Data cleaning + EDA

3. Data Visualization

Topics to Cover:

- Basic chart types: bar, line, pie, scatter plots
- Matplotlib & seaborn syntax

Resources:

- [Kaggle Data Visualization Course](#)
- [Matplotlib Quickstart](#)
- [Seaborn Tutorial](#)

Suggested Time Frame:

Day 4 (1.5 hour) — Basic visualization

4. SQL for Data Analysts

Topics to Cover:

- Basic SELECT queries, filtering, sorting
- JOINS, GROUP BY, aggregations

Resources:

- [Codecademy SQL Basics](#) (Free sections)
- [SQLBolt Interactive Lessons](#)
- [Mode SQL Tutorial](#)

Suggested Time Frame:

Day 5 (2 hours) — SQL basics

5. Essential Excel Skills

Topics to Cover:

- Data entry, formulas, basic functions (SUM, AVERAGE, VLOOKUP)
- Filtering, sorting, pivot tables

Resources:

- [Excel Exposure Quick Guide](#)
- [Microsoft Excel Essential Training \(LinkedIn Learning\)](#) (Free 30-day trial)

Suggested Time Frame:

Day 6 (1–2 hours) — Excel for analysts

6. Soft Skills & Workflow

Topics to Cover:

- Communicating findings, writing clear summaries
- Time management, documenting your work
- Getting comfortable with workplace data tools (Google Sheets, Slack, etc.)

Resources:

- [How to Write Better Data Analysis Reports \(Towards Data Science\)](#)
- [Time Management Tips for Data Analysts \(Article\)](#)

Suggested Time Frame:

Day 7 (1 hour) — Comms + workplace workflows

Summary Table

Day	Skill/Topic	Resource(s)	Duration
1	Python Basics	Kaggle Python, Automate the Boring Stuff	2h
2	pandas Data Manipulation	Kaggle pandas, 10 Minutes to pandas	2h
3	Data Cleaning & EDA	DataCamp Cleaning, Kaggle Challenge	2h
4	Data Visualization	Kaggle Visualization, Matplotlib, Seaborn	1.5h
5	SQL Fundamentals	Codecademy, SQLBolt, Mode SQL	2h
6	Excel for Analysts	Excel Exposure, LinkedIn Excel Course	1–2h

7	Soft Skills & Workflow	TDS, DataCamp Articles	1h
---	------------------------	------------------------	----

Tips for Success:

- Practice by applying tasks to any dataset you can access (Kaggle, public data).
- Document every step and make notes—these will help you later in your job.
- If you finish a topic ahead of time, revisit past exercises or try a small project combining what you’ve learned (like analyzing and visualizing a simple dataset).
- Ask questions in online communities if you get stuck (Kaggle forums, Stack Overflow).

Starting with this focused, practical roadmap will set a strong foundation and help you hit the ground running in your new analyst role!
