

Beginner Projects (Basics: DOM, Events, Functions)

1. To-Do List App

- Add, mark complete, delete tasks
- Learn DOM manipulation & localStorage.

2. Counter App

- Increment, decrement, reset
- Learn event listeners & updating the UI.

3. Calculator

- Basic operations (+, -, ×, ÷)
- Learn handling button clicks & string evaluation.

4. Digital Clock

- Show real-time hours, minutes, seconds
- Learn setInterval() & Date object.

5. Color Flipper / Background Changer

- Click button → random color applied to background
- Learn arrays, random numbers, and DOM updates.

Intermediate Projects (APIs, Forms, More Logic)

1. Weather App

- Fetch weather data from OpenWeather API
- Learn **fetch()**, **promises**, **async/await**.

2. Quiz App

- Multiple-choice questions
- Track score & show results at the end.

3. Notes App

- Save, edit, delete notes
- Persist data in localStorage.

4. Movie Search App

- Use an API like OMDB
- Search for movies and display posters, ratings.

5. **Form Validator**

- Validate email, password strength, required fields
 - Learn regular expressions (RegExp).
-

Advanced Projects (Full Features, Complex State, APIs)

1. **Expense Tracker**

- Track income/expenses with charts (Chart.js)
- Store in localStorage or IndexedDB.

2. **E-commerce Cart System**

- Add/remove products to cart, calculate total
- Store cart in localStorage.

3. **Chat Application (Real-time)**

- Use **WebSockets** or Firebase real-time database.

4. **Kanban Board (like Trello)**

- Drag & drop tasks between columns
- Learn **drag & drop API**.

5. **Recipe Finder App**

- Search recipes using a free API
- Show ingredients & cooking instructions.

6. **Mini Social Media Feed**

- Post messages, like posts, show comments
- Data stored in localStorage or mock backend (JSON Server).

7. **Music Player App**

- Play, pause, next/previous songs
 - Progress bar, volume control.
-

Expert-Level (When you're comfortable)

1. **Portfolio Website with Blog CMS** (static + dynamic content).
2. **Real-time Multiplayer Game** (e.g., Tic-Tac-Toe with WebSockets).

3. **Clone of a Popular App** (Instagram feed, YouTube UI, Spotify).
4. **Progressive Web App (PWA)** (offline support, installable app).
5. **Full-stack Project with Backend (Node.js/Express + MongoDB).**
